

# RST tip

## ReStructuredText Source Links for Pelican

A relative link is relative to the directory which contains the current file where you are inserting the link, so file links look like this:

```
Example relative link: `This is a relative link to previous article <{filename}./emacs-tip-en.rst>`_
```

```
Example root link: `This is an absolute link to previous article <{filename}/tips/emacs-tip-en.rst>`_
```

Example relative link: [This is a relative link to previous article](#)

Example root link: [This is an absolute link to previous article](#)

Example of a deferred relative link:

```
`Deferred emacs tip relative link`_
```

```
.. _`Deferred emacs tip relative link`: {filename}./emacs-tip-en.rst
```

[Deferred emacs tip relative link](#)
